Name $\qquad$
Honors Physics
Period $\qquad$ (25 pts) Drawing Vectors, Resultants, Non-Perpendicular Vectors

Directions - Draw the following vectors using the appropriate method learned in class.
1.

A robot travels $60 . \mathrm{km}$ at $35^{\circ}$ South of West

Scale: $1 \mathrm{~cm}=$ $\qquad$ km Date $\qquad$
Vectors/Projectiles WS \#2H
Mrs. Nadworny

$\qquad$

2.

A box is dragged to the left with a force of 48 N at an angle of $20 . .^{\circ}$ above the horizon.

Scale:

3. Vectors $A$ and $B$ have a resultant $R$. Vector $A$ and resultant $R$ are represented in the diagram below.

Which vector best represents vector $B$ ?
A) $\uparrow_{B}$
B) $\xrightarrow{B}$
C) $\downarrow B$
D) $\quad B$
4. A frog hops 10.0 meters North along a river bank, and then hops 4.0 meters East to a lily pad. What is the displacement of the frog?

| Scale Method | Math Method |  |
| :--- | :--- | :--- |
|  |  |  |

Answers in size order: 11, 22
Draw in the resultant for the following vectors. Label your resultant.
